

All our packages contain hosting, software and everything you need to sell on-line. Eshop Standard and Pro both contain Eshop 3.1. The biggest difference is that the Pro version supports on-line processing of credit cards. That means that our system contacts the bank to know if the credit card is valid. This feature is only available to people that have a credit card merchant account in Germany, Austria, Belgium, France, Luxembourg, Netherlands, United Kingdom or Switzerland. In the Standard version, you will have to enter the credit card number of your customers manually in your terminal.
